## Looking for a standard to survey and record European utility networks.

With technology and survey techniques moving forward, it is critical to produce shared best practices following the principles of INSPIRE\* and CIP\*\* directives.

\* 2007/2/EC  
\*\* 2008/114/EC

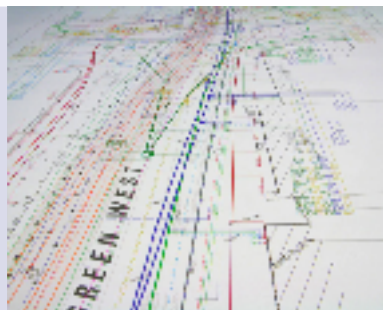

## Building a large partnership between Public and Private companies to share knowledge and ideas.

Power is knowledge shared. The power of a community of practice is exponentially related to the knowledge shared by the individual members.

## Designing better and safer utility networks and secure data management systems.

The safety of a network can be achieved by a proper design of the network itself, but also with the protection of the related spatial information.

## We are looking for experts in utility networks. Why don't you join us?

National, Regional and/or Local authority engineering personnel responsible for the management and service of underground utilities can apply to be in the team of experts. If you are interested, please send your request and CV to: [simon.vrekar@eurogi.org](mailto:simon.vrekar@eurogi.org)
